3. Operational Rules & Asset Protection Options

- **B2B Copyright & Usage Licensing Premium:** Base packages include standard marketing usage rights for the local listing broker (LoopNet, MLS, flyers). If a national corporate entity or institutional investment fund requires absolute, unconditional global copyright buyouts for corporate web integration or billboards, apply a mandatory **30% to 50% licensing surcharge** over the cumulative package fee.
- **Asset Preparation & Safety Protocol:** Industrial locations must be checked for safety rules before shooting. If a plant requires a personal escort or safety gear (hardhat, steel-toes), this must be locked into the timeline beforehand. All warehouse floors should be completely cleared of stray pallets and equipment debris prior to your arrival.
- **Outsource Pipeline Optimization:** To keep your business scalable, raw bracketed exposures (.RAW files) should be synced to high-volume overseas teams immediately following data ingest. This setup protects your personal hours, keeping your schedule clear for client acquisition and physical creation.
